

Welcome to Shipham Valves

Established in 1798 Shipham Valves is one of the most experienced and highly respected valve manufacturers in the world, with a Global reputation for excellence in product quality, reliability and the highest levels of customer service.

Since the 1930's, Shipham Valves have been entrenched as a key valve supplier within the British Royal Navy and Ministry of Defence, satisfying the needs of a market known for its arduous requirements for product performance and reliability, quality assurance, traceability, certification, and documentation.

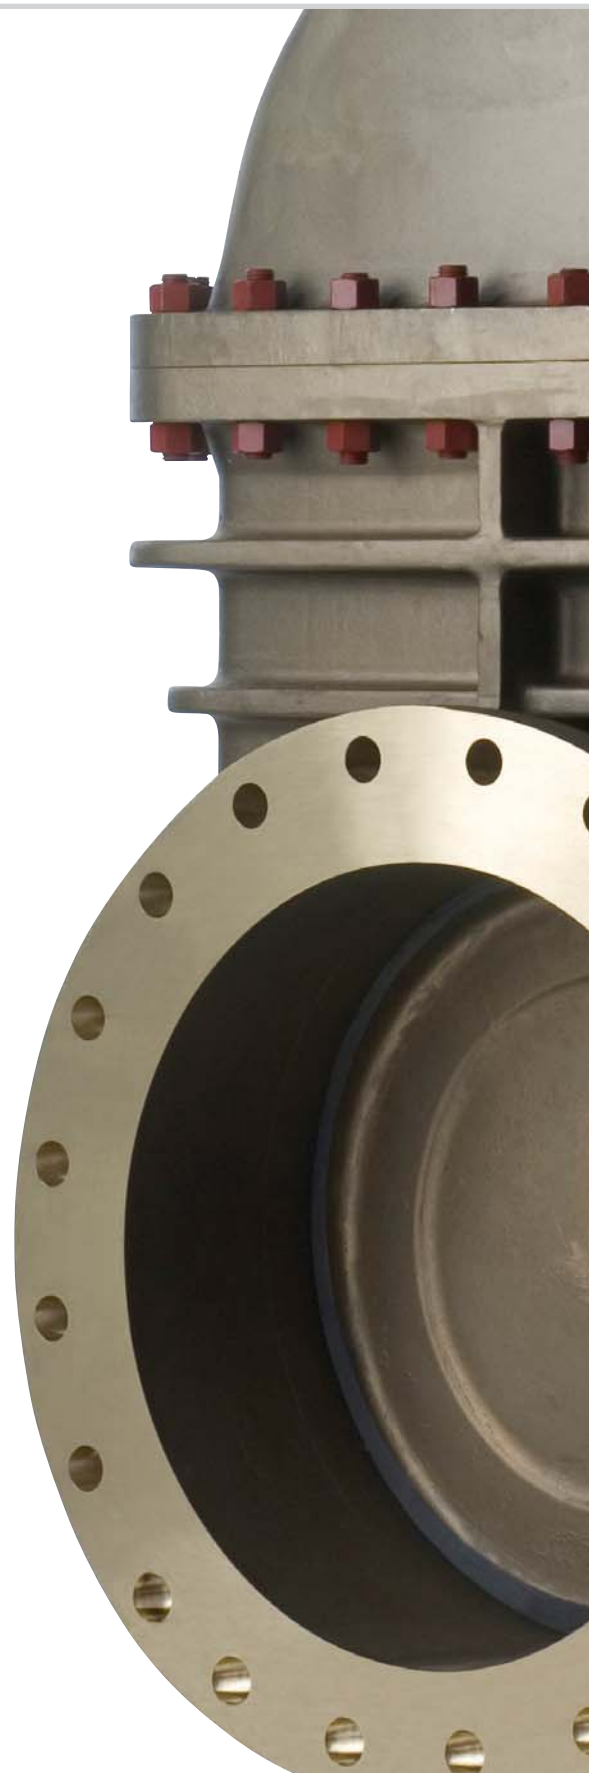

Shipham Valves have successfully taken this experience and these capabilities into many other areas, including the global oil and gas and chemical markets. Shipham have now established themselves firmly as a Global leader in the design and manufacture of quality valve products used on fire fighting and cooling applications in demanding environments such as seawater and other severe fluids.

Shipham's involvement in almost every major oil and gas project carried out around the world in the last decade has enabled the Company to gain valuable commercial experience in managing multi-million-pound projects for major blue chip companies where delivery lead-times are critical and failure is not an option. We are firmly committed to the ongoing support of our current markets and customers, and to extending our reach into other markets where our expertise as first class designers and manufacturers of non-ferrous valve solutions is recognised and required.

Operating from a 60,000-sq/ft manufacturing facility in Hull, England, Shipham offers the most diverse range of valves by type, material, and size, of any single valve manufacturer in the world, providing gate, globe, ball, check, butterfly and hydrant valves, in sizes from 1/4" to 46" and in materials from bronze to zirconium.

We believe that Shipham Valves offers to the market the best commercial package of product quality, global representation, service, delivery, and through life cost. Our self-belief is backed by an enviable reputation with our clients who continue to re-order, relying on Shipham as an integral part of their supply chain, and recognising us as leaders in our field.

"Our aim is to be your preferred partner for the supply of non-ferrous and high alloy valves"
